Evaluation

Your project will be reviewed by a Udacity reviewer against the DNN Speech Recognizer project **rubric**. Review this rubric thoroughly, and self-evaluate your project before submission. All criteria found in the rubric must meet specifications for you to pass.

Submission

When you are ready to submit your project, collect the following files and compress them into a single archive for upload:

- The `vui_notebook.ipynb` file with fully functional code, all code cells executed and displaying output, and all questions answered.
- An HTML or PDF export of the project notebook with the name `report.html` or `report.pdf`.
- The `sample_models.py` file with all model architectures that were trained in the project Jupyter notebook.
- The `results/` folder containing all HDF5 and pickle files corresponding to trained models.

Alternatively, your submission could consist of the GitHub link to your repository.

Project Submission Checklist

Before submitting your project, please review and confirm the following items.

☐ I am confident all rubric items have been met and my project will pass as submitted.

☐ Project builds correctly without errors and runs.

☐ All required functionality exists and my project behaves as expected per the project's specifications.

Once you have checked all these items, you are ready to submit!

Ready to submit your project?
